By establishing clear timelines, the DepEd aims to foster a conducive learning environment that aligns with pedagogical goals and societal needs.

Formulation of the School Calendar: Policy Frameworks and Stakeholder Involvement

Legal and Policy Foundations

The development of the school calendar is anchored in national policies, notably:

- The Republic Act No. 7797 (Department of Education Act of 1994), which emphasizes accessible quality education
- DepEd Order No. 13, series of 2017, which provides guidelines on the school calendar and activities
- The K-12 Basic Education Program, which extended the basic curriculum and influenced calendar structuring

These policies ensure the calendar aligns with national educational standards and developmental objectives.

Stakeholder Engagement

While the DepEd formulates the main calendar, input from various stakeholders is critical:

- Regional and division offices provide localized insights
- Teachers and school heads contribute feedback based on classroom realities
- Parent and student representatives voice concerns regarding scheduling
- External partners, such as local government units and NGOs, coordinate calendar activities for community-based programs

This participatory approach seeks to balance national priorities with regional and local contexts.

Annual Calendar Release and Updates

Typically, the DepEd releases the official school calendar several months before the academic year commences, often in April or May. This allows schools to prepare logistics, curricula, and resource deployment. The calendar is also subject to updates in response to extraordinary circumstances, such as natural disasters or public health emergencies.

Major Components and Activities in the DepEd School Calendar

Creating Your First Arduino Project with Flowcode

Let's walk through a simple example: blinking an LED connected to an Arduino pin.

Designing the Flowchart

- Open Flowcode and create a new project targeting your Arduino.
- Drag components such as:
 - Digital Output (for LED control)
 - Timers (for delays)
- Connect the components logically:
 - Set the output pin (e.g., Pin 13 for built-in LED)
 - Implement a loop that turns the LED on, waits, turns it off, waits again.

Configuring Components

- Set the digital output component to pin 13.
- Use a timer component for delay periods (e.g., 500 milliseconds).

Compiling and Uploading

- Validate the flowchart for errors.
- Generate code and compile within Flowcode.

- Upload to Arduino directly from Flowcode or export code to Arduino IDE.
- Run the program; the built-in LED should blink at 1Hz.

Advanced Arduino Projects with Flowcode

Beyond basic blinking LEDs, Flowcode enables complex projects:

Sensor-Based Automation

- Connect sensors like ultrasonic, IR, or temperature sensors.
- Use flowcharts to process sensor data and trigger actuators.
- Example: Automatic room light system that turns on lights when motion is detected.

Motor and Robotics Control

- Control DC motors, servo motors, or stepper motors.
- Implement obstacle avoidance, line following, or robotic arm control.
- Flowcharts handle sensor input, decision-making, and motor actuation seamlessly.

Wireless Communication

- Use modules like Bluetooth, Wi-Fi (ESP8266), or RF.
- Design flowcharts to send/receive data and respond accordingly.
- Example: Remote-controlled car or IoT sensor network.

Display and User Interface

- Integrate LCDs, OLEDs, or touchscreens.
- Use flowcharts to display data or receive user inputs.
- Example: Digital thermometer with display and buttons.
