Sample Microeconomics Multiple Choice Questions with Explanations

Question 1: Demand and Elasticity

If the price of a good increases by 10%, and the quantity demanded decreases by 20%, what is the price elasticity of demand?

A) 0.5

B) 2

C) 0.2

D) 5

Answer: B) 2

Explanation:

Elasticity of demand = (% change in quantity demanded) / (% change in price)

= -20% / 10% = -2 (absolute value is 2)

Since the absolute value is greater than 1, demand is elastic.

- A) Perfect Competition
- B) Monopoly
- C) Monopolistic Competition
- D) Oligopoly

Answer: C) Monopolistic Competition

QuestionAnswer What is the primary focus of microeconomics? Microeconomics focuses on the behavior of individual consumers and firms and how they make decisions regarding resource allocation and pricing. Which of the following best describes a 'demand curve'? A demand curve illustrates the relationship between the price of a good and the quantity demanded by consumers, typically showing that demand decreases as price increases. In a multiple-choice exam on microeconomics, what does the term 'elasticity' refer to? Elasticity measures how much the quantity demanded or supplied responds to changes in price or other factors. Which concept explains why firms might produce more when prices increase? The law of supply states that, all else equal, an increase in price leads to an increase in quantity supplied. What is a 'perfectly competitive market'? A perfectly competitive market is one where many buyers and sellers exist, products are identical, and no single participant can influence the market price. Why are multiple-choice questions effective

in testing microeconomic understanding? They allow for quick assessment of knowledge across various topics and can test both conceptual understanding and application skills. What is the significance of the 'consumer surplus' in microeconomics? Consumer surplus represents the difference between what consumers are willing to pay for a good and what they actually pay, indicating the benefit received from a transaction.
