Sample question: Describe the functions of the mitochondria and explain their importance in cells.

Model answer from the memorandum:

The mitochondria are the powerhouses of the cell, responsible for producing energy in the form of ATP through respiration. They are crucial because they supply the energy required for various cellular activities, including growth, repair, and active transport.

Genetics and Inheritance

This section is vital for understanding hereditary patterns:

- Punnett Squares: The memorandum provides step-by-step instructions on how to set up and interpret them.
- Dominant/Recessive Traits: Clarification on how these traits influence phenotype, with examples.

Sample question: A heterozygous tall plant is crossed with a dwarf plant. What is the probability that the offspring will be tall?

Answer as per memorandum:

Assuming tall (T) is dominant and dwarf (t) recessive, the cross Tt x tt yields:

- Genotypic ratio: Tt : tt (50%)
- Phenotypic ratio: Tall : Dwarf (50%)
- Therefore, there is a 50% chance that the offspring will be tall.

Ecology and Environmental Impact

The memorandum emphasizes understanding ecological relationships and human impacts:

- Reproductive System: Gamete production, fertilization, pregnancy, and reproductive health issues.

Sample question: Describe the pathway of a red blood cell from the lungs to the body tissues.

Answer:

Red blood cells pick up oxygen in the alveoli of the lungs, where oxygen diffuses into the blood. They then travel via pulmonary veins to the left atrium, pass into the left ventricle, and are pumped through the aorta to systemic arteries. From there, they reach body tissues where oxygen is released for cellular use.

What are the major stages of the cell cycle described in the 2013 memorandum? The major stages are interphase (G1, S, G2 phases) and mitotic phase (mitosis and cytokinesis). How does natural selection lead to evolution according to the 2013 biology memorandum? Natural selection favors traits that increase survival and reproduction, leading to changes in allele frequencies over generations, which drives evolution. What is the function of the xylem in plants as outlined in the 2013 syllabus? Xylem transports water and mineral nutrients from the roots to the leaves and provides structural support. Describe the process of genetic inheritance as explained in the 2013 memorandum.
